Natural harmony (*Mus.*), the harmony of the triad or common chord.
Natural history, in its broadest sense, a history or description of nature as a whole, including the sciences of *botany, zoology, geology, mineralogy, paleontology, chemistry, and physics.* In recent usage the term is often restricted to the sciences of botany and zoology collectively, and sometimes to the science of zoology alone. — **Natural law**, that instinctive sense of justice and of right and wrong, which is native in mankind, as distinguished from specifically revealed divine law, and formulated human law. — **Natural modulation** (*Mus.*), transition from one key to its relative keys. — **Natural order** (*Nat. Hist.*). See under **ORDER**. — **Natural person**. (*Law*) See under **PERSON**, *n.* — **Natural philosophy**, originally, the study of nature in general; in modern usage, that branch of physical science, commonly called *physics*, which treats of the phenomena and laws of matter and considers those effects only which are unaccompanied by any change of a chemical nature; — contrasted with *mental and moral philosophy*. — **Natural scale** (*Mus.*), a scale which is written without flats or sharps. *Model* would be a preferable term, as less likely to mislead, the so-called *artificial* scales (scales represented by the use of flats and sharps) being equally natural with the so-called *natural* scale. — **Natural science**, **natural history**, in its broadest sense; — used especially in contradistinction to *mental or moral science*. — **Natural selection** (*Biol.*), a supposed operation of natural laws analogous, in its operation and results, to designed selection in breeding plants and animals, and resulting in the *survival of the fittest*. The theory of natural selection supposes that this has been brought about mainly by gradual changes of environment which have led to corresponding changes of structure, and that those forms which have become so modified as to be best adapted to the changed environment have tended to survive and leave similarly adapted descendants, while those less perfectly adapted have tended to die out through lack of fitness for the environment, thus resulting in the *survival of the fittest*. See **DARWINISM**. — **Natural system** (*Bot. & Zool.*), a classification based upon real affinities, as shown in the structure of all parts of the organisms, and by their embryology.

It should be borne in mind that the *natural system* of botany is natural only in the constitution of its genera, tribes, orders, etc., and in its grand divisions.

Natural theology, or **Natural religion**, that part of theological science which treats of those evidences of the existence and attributes of the Supreme Being which are exhibited in nature; — distinguished from *revealed religion*. See **Quotation** under **NATURAL**, *a.*, 3. — **Natural vowel**, the vowel sound heard in *urn, fur, sir, her*, etc.; — so called as being uttered in the easiest open position of the mouth organs. O.

O (ō). 1. O, the fifteenth letter of the English alphabet, derives its form, value, and name from the Greek O, through the Latin. The letter came into the Greek from the Phœnician, which possibly derived it ultimately from the Egyptian. Etymologically, the letter o is most closely related to *a*, *e*, and *u*; as in E. bone, AS. bōn; E. stone, AS. stān; E. broke, AS. breccan to break; E. bore, AS. bearn to bear; E. dove, AS. dūfe; E. toft, tuft; tone, tune; number, F. nombre.

The letter o has several vowel sounds, the principal of which are its long sound, as in *bone*, its short sound, as in *not*, and the sounds heard in the words *orb*, *son*, *do* (*food*), and *wolf* (*book*). In connection with the other vowels it forms several diphthongs and diphthongs. See *Guide to Pronunciation*, §§ 107-129.

2. Among the ancients, O was a mark of triple time, from the notion that the ternary, or number 3, is the most perfect of numbers, and properly expressed by a circle, the most perfect figure.

O was also anciently used to represent 11: with a dash over it (O), 11,000.

O (ō), *n.*; *pl.* O's or Oes (ōz). 1. The letter O, or its sound. "Mouthing out his hollow oes and aea." *Tennyson.*

2. Something shaped like the letter O; a circle or oval. "This wooden O (Globe Theater)." *Shak.*

3. A cipher; zero. [*R.*]

Thou art an O without a figure. *Shak.*

O'. [*Ir. o a descendant.*] A prefix to Irish family names, which signifies *grandson* or *descendant* of, and is a character of dignity, as, O'Neil, O'Carroll.

O' (ō); unaccented ō, prep. A shortened form of *or* or *on*. "At the turning of the tide." *Shak.*

O (ō), *a.* [*See O'.*] One. [*Obs.*] *Chaucer.* "Alle thre but o God." *Piers Plowman.*

O (ō), *interj.* An exclamation used in calling or directly addressing a person or personified object; also, as an emotional or impassioned exclamation expressing pain, grief, surprise, desire, fear, etc.

For ever, O Lord, thy word is settled in heaven. *Ps. cxix. 69.*
O how love I thy law! it is my meditation all the day. *Ps. cxix. 97.*

O is frequently followed by an ellipsis and *that*, as in expressing a wish: "O [I wish] that Iahmael might live before thee!" *Gen. xvii. 18;* or in expressions of surprise, indignation, or regret: "O [it is said] that such eyes should o'er meet other object!" *Sheridan Knowles.*

A distinction between the use of *O* and *oh* is insisted upon by some, namely, that *O* should be used only in direct address to a person or personified object, and should never be followed by the exclamation point, while *oh* (or *oh*) should be used in exclamations where no direct appeal or address to an object is made, and may be followed by the exclamation point or not, according to the nature or construction of the sentence. Some insist that *oh* should be used only as an interjection expressing strong feeling. The form *O*, however, is, it seems, the one most commonly employed for both uses by modern writers and correctors for the press. "O, I am slain!" *Shak.* "O what a fair and ministering angel!" "O sweet angel!" *Longfellow.*

O for a kindling touch from that pure flame! *Wordsworth.*
But she is in her grave, — and oh
The difference to me! *Wordsworth.*

Oh for a lodge in some vast wilderness! *Couper.*

We should distinguish between the sign of the vocative and the emotional interjection, writing *O* for the former, and *oh* for the latter. *Earle.*

O dear, and O dear me! [corrupted fr. *F. O Dieu!* or *It. O Dio!* O God! O Dio mio! O my God! *Wymen*], exclamations expressive of various emotions, but usually prompted by surprise, consternation, grief, pain, etc.

Ob-ject-ive (ób-jékt'ív), *a.* [Cf. *F. objectif*.] 1. Of or pertaining to an object.

2. (Metaph.) Of or pertaining to an object; contained in, or having the nature or position of, an object; outward; external; extrinsic; — an epithet applied to whatever is exterior to the mind, or which is simply an object of thought or feeling, and opposed to *subjective*.

In the Middle Ages, subject meant substance, and has this sense in Descartes and Spinoza; sometimes, also, in Reid. *Subjective* is used by William of Occam to denote that which exists independent of mind; *objective*, what is formed by the mind. This shows what is meant by *realistic objective* in Descartes. Kant and Fichte have inverted the meanings. *Subject*, with them, is the mind which knows; *object*, that which is known; *subjective*, the varying conditions of the knowing mind; *objective*, that which is in the constant nature of the thing known. *Trindenberg*.

Objective means that which belongs to, or proceeds from, the object known, and not from the subject knowing, and thus denotes what is real, in opposition to that which is ideal — what exists in nature, in contrast to what exists merely in the thought of the individual. *Sir W. Hamilton*.

Objective has come to mean that which has independent existence or authority, apart from our experience or thought. Thus, moral law is said to have *objective* authority, that is, authority belonging to itself, and not drawn from anything in our nature. *Caldwood* (*Fleming's Vocabulary*).

3. (Gram.) Pertaining to, or designating, the case which follows a transitive verb or a preposition, being that case in which the direct *object* of the verb is placed. See *ACCU-SATIVE*, *n.*

The *objective* case is frequently used without a governing word, esp. in designations of time or space, where a preposition, as *at*, *in*, *on*, etc., may be supplied.

My troublous dream [on] this night doth make me sad. *Shak.*

To write of victories [in or for] next year. *Hudibras*.

Objective line (*Perspective*), a line drawn on the geometrical plane which is represented or sought to be represented. — *Objective plane* (*Perspective*), any plane in the horizontal plane that is represented. — *Objective point*, the point or result to which the operations of an army are directed. By extension, the point or purpose to which anything, as a journey or an argument, is directed.

Syn. — *Objective*, *Subjective*. *Objective* is applied to things exterior to the mind, and *subjective* to its affection; *subjective*, to the operations of the mind itself. Hence, an *objective* motive is some outward thing awakening desire; a *subjective* motive is some internal feeling or propensity. *Objective* views are those governed by outward things; *subjective* views are produced or modified by internal feeling. *Sir Walter Scott's* poetry is chiefly *objective*; that of Wordsworth is eminently *subjective*.

In the philosophy of mind, *subjective* denotes what is referred to the thinking subject, the ego; *objective* what belongs to the object of thought, the non-ego. *Sir W. Hamilton*.

Syn. — To attain; gain; procure; acquire; win; earn.

See *ATTAIN*. — **TO OBTAIN**, *GET*, *GAIN*, *EARN*, *ACQUIRE*.

The idea of getting is common to all these terms. We may, indeed, with only a slight change of sense, substitute get for either of them; as, to get or to gain a prize; to get or to obtain an employment; to get or to earn a living; to get or to acquire a language. To gain is to get by striving; and as this is often a part of our good fortune, the word gain is peculiarly applicable to whatever comes to us fortuitously. Thus, we gain a victory, we gain a cause, we gain an advantage, etc. To earn is to deserve by labor or service; as, to earn good wages; to earn a triumph. Unfortunately, one does not always get or obtain what he has earnestly desired. To obtain implies desire for possession, and some effort directed to the attainment of that which is not immediately within our reach. Whatever we thus seek and get, we obtain, whether by our own exertions or those of others; whether by good or bad means; whether permanently, or only for a time. Thus, a man obtains an employment; he obtains information he desired; he obtains an answer to a letter, etc. To acquire is more limited and specific. We acquire what comes to us gradually in the regular exercise of our abilities, while we obtain what comes in any way, provided we desire it. Thus, we acquire knowledge, property, honor, reputation, etc. What we acquire becomes, to a great extent, permanently our own; as, to acquire a language; to acquire habits of industry, etc.

Oxide (ôks'îd or -îd), *n.* [Fr. oxygène oxygen + acide acid; cf. F. oxyde. The French word was correctly spelled *oxide*, till about the year 1840, when, in ignorance or forgetfulness of the true history and composition of the word, the orthography was changed to make it represent the *v* of Gr. *ôxys*, from which it was supposed to be directly derived.] (Chem.) A binary compound of oxygen with an atom or radical, or a compound which is regarded as binary; as, iron oxide, ethyl oxide, nitrogen oxide, etc.

In the chemical nomenclature adopted by Guyton de Morveau, Lavoisier, and their associates, the term *oxides* was made to include all compounds of oxygen which had no acid (F. *acide*) properties, as contrasted with the acids, all of which were at that time supposed to contain oxygen. The orthography *oxide*, *oxyd*, etc., was afterwards introduced in ignorance or disregard of the true etymology, but these forms are now obsolete in English. The spelling *oxid* is not common.

Ox'id-iz-able (ôks'îd-iz-â-b'l), *a.* Capable of being oxidized.

Ox'id-ize (-îz), *v. t.* [imp. & p. p. OXIDIZED (-îz'd); p. pr. & vb. n. OXIDIZING.] (Chem.) To combine with oxygen, or subject to the action of oxygen, or of an oxidizing agent. Specifically: (a) To combine with oxygen or with more oxygen; to add oxygen to; as, to oxidize nitrous acid so as to form nitric acid. (b) To remove hydrogen from (anything), as by the action of oxygen; as, to oxidize alcohol so as to form aldehyde. (c) To subject to the action of oxygen or of an oxidizing agent, so as to bring to a higher grade, as an -ous compound to an -ic compound; as, to oxidize mercurous chloride to mercuric chloride.

In certain cases to oxidize is identical with to acidify; for, in nearly all cases, the more oxygen a substance contains the more nearly does it approximate to acid qualities; thus, by oxidation many elements, as sulphur, nitrogen, carbon, chromium, manganese, etc., pass into compounds which are acid anhydrides, and thus practically in the acid state.

A colorless, tasteless, odorless, gaseous element occurring in the free state in the atmosphere, of which it forms about 23 per cent by weight and about 21 per cent by volume, being slightly heavier than nitrogen. Symbol O. Atomic weight 15.96.

It occurs combined in immense quantities, forming eight ninths by weight of water, and probably one half by weight of the entire solid crust of the globe, being an ingredient of silica, the silicates, sulphates, carbonates, nitrates, etc. Oxygen enters into combination with almost all elements (except fluorine), forming oxides, bases, oxyacid anhydrides, etc., the process in general being called *oxidation*, of which combustion is only an intense modification. At ordinary temperatures with most substances it is moderately active, but at higher temperatures it is one of the most violent and powerful chemical agents known. It is indispensable in respiration, and in general is the most universally active and efficient element. It may be prepared in the pure state by heating potassium chlorate.

This element (called *dephlogisticated air* by Priestley) was named *oxygen* by Lavoisier because he supposed it to be a constituent of all acids. This is not so in the case of a very few acids (as *hydrochloric*, *hydrobromic*, *hydric sulphuric*, etc.), but these do contain elements analogous to oxygen in property and action. Moreover, the fact that most elements approach the nearer to acid qualities in proportion as they are combined with more oxygen, shows the great accuracy and breadth of Lavoisier's conception of its nature.

Syn. — To cover; cloak; hide; extenuate; conceal. — **TO PALLIATE, EXTENUATE, CLOAK**. These words, as here compared, are used in a figurative sense in reference to our treatment of wrong action. We cloak in order to conceal completely. We extenuate a crime when we endeavor to show that it is less than has been supposed; we palliate a crime when we endeavor to cover or conceal its enormity, at least in part. This naturally leads us to soften some of its features, and thus palliate approaches extenuate till they have become nearly or quite identical. "To palliate is not now used, though it once was, in the sense of wholly cloaking or covering over, as it might be, our sins, but in that of extenuating; to palliate our faults is not to hide them altogether, but to seek to diminish their guilt in part." Trench.

2. Plato believed God to be an infinitely wise, just, and powerful Spirit; and also that he formed the visible universe out of preexistent amorphous matter, according to perfect patterns of ideas eternally existent in his own mind. Philosophy he considered as being a knowledge of the true nature of things, as discoverable in those eternal ideas after which all things were fashioned. In other words, it is the knowledge of what is eternal, eternal necessarily, and is unchangeable; not of the temporary, the dependent, and changeable; and of course it is not obtained through the senses; neither is it the product of the understanding, which concerns itself only with the variable and the transitory; nor is it the result of experience and observation; but it is the product of our *reason*, which, as partaking of the divine nature, has innate ideas resembling the eternal ideas of God. By contemplating these innate ideas, reasoning about them, and comparing them with their copies in the visible universe, reason can attain that true knowledge of things which is called *philosophy*. Plato's professed followers, the Academics and the New Platonists, differed considerably from him, yet are called *Platonists*. *Murdock.*
